Project Name	ComicCraft – AI-Powered Comic Story Generator
Maximum Marks	5 Marks

Project Description

ComicCraft is a web-based application developed to generate personalized comic stories and illustrations using Artificial Intelligence. Users provide a story prompt and details such as character name, setting, tone and preferred art style. Gemini models generate structured story and dialogue, while Stable Diffusion generates comic-style images. FastAPI provides the backend, HTML/CSS/Jinja2 support the interface, and the output is arranged into a five-panel comic that can be previewed and exported as PDF.

Technical Architecture

Browser interface → FastAPI backend → Gemini Flash/Pro and Stable Diffusion → layout assembly → preview → PDF export. Persistent database/cloud storage is not documented in the current version.

Project Workflow

Step	Description
1	User enters story prompt and customization details.
2	FastAPI receives and validates the request.
3	Gemini Flash generates the structured comic outline.
4	Gemini Pro generates detailed narration and dialogue.
5	Stable Diffusion generates an illustration for each panel.
6	Application combines text and images into a five-panel layout.
7	Comic is displayed for preview.
8	Completed comic is exported as a PDF.

Implementation Result

The report states that the project demonstrates an end-to-end Generative AI workflow transforming a textual idea into a multi-panel visual comic and combining story generation, image synthesis, layout management, preview and PDF generation.
